

## Custom built to user specifications:

- Color Touch Screen display and control
- Full ISO 17025 accredited calibration
- Initial on-site installation and training included
- Built-in self-checks and diagnostics
- Virtual technician option through cloud-based connection.
- May be ordered with or without liquid prime-movers
- May be flow-through or recirculating design
- User specified test fluids
- Designed and built using off-the-self components

## Custom Hydro Testing System

In our 26 years industry experience, custom designed systems are our specialty. GTW Labs can design and build a system to fit your specific application using off-the-self components both quickly and at competitive cost compared to standard systems. GTW's custom systems can optimize your needs while maintaining low cost and simple operation. This is achieved by focusing on only the options and functions you need, omitting the extra complicating and costly unnecessary features. All custom units are built around our standard model to keep both costs and lead times to a minimum.

## Typical Specifications

### Pressure

Max Test Pressure: User Specified up to 4,000 psig

### Flow

Range: User Specified up to 500 gpm  
Standard Accuracy:  $\pm 0.25\%$  of Full Scale
